Hydro One Brampton Helps to Bring Energy Conservation Programs to Businesses in the GTA

Hydro One Brampton, along with six other electrical utilities, hosted the *Energy into Action* conference at the International Centre in Mississauga last Wednesday. Pinball Clemens kicked off the event and motivated the crowd with his keynote address encouraging the audience to take the lead on energy conservation. Guests were then invited to attend informative sessions where they could learn more about available incentives and help them find what they need to take advantage of the Ontario Power Authority (OPA) saveONenergy programs.

Over 400 business conservation leaders and 60 industry exhibitors took part in the one day conference. Scott Miller, Director of Customer Care and Communications, summed up the conference – "Leaders in the industry are eager to ensure that not only do they adopt environmentally responsible practices but also keep up with the latest energy efficient trends".

Mr. Miller highlighted that businesses are aware that to stay competitive, they need to make smart business decisions and implement sustainable energy practises to keep operating costs low. Provincial conservation programs funded by the OPA and delivered by the local utilities not only help the province achieve their conservation goals, but also helps customers in reducing their electricity or energy costs.

The conference demonstrated the need for a joint effort between the utilities, solution providers and end-use customers to achieve the province's conservation goals. The benefits of networking with peers help introduce new technologies, processes and procedures which help in reducing the customers' bottom line.

For those that missed the event, they can download copies of the presentations and visit the photo gallery to view some of the day's highlights at www.energyintoaction.com.
